

SONY

3-757-561-24(2)

Videocassette Recorder

Model:

UVW-1800/1800P

Operating Instructions page i(E)

Before operating the unit, please read this manual thoroughly and retain it for future reference.

Mode d'emploi page-i(F)

Avant la mise en service de cet appareil, prière de lire attentivement ce mode d'emploi que l'on conservera pour toute référence ultérieure.

Owner's Record

The model and serial numbers are located at the rear. Record the serial number in the space provided below. Refer to these numbers whenever you call upon **your** Sony dealer regarding this product

Model No. UVW-1800

Serial No. -

WARNING

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

CAUTION
RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION TO REDUCE THE RISK OF ELECTRIC SHOCK

DO NOT REMOVE COVER (OR BACK)

NO USER-SERVICEABLE PARTS INSIDE

REFER SERVICING TO QUALIFIED SERVICE PERSONNEL

This symbol is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Caution

Television programs, films, video tapes and other materials may be copyrighted. Unauthorized recording of such material may be contrary to the provisions of the copyright laws.

For the customers in USA

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if **not** installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

The shielded interface cable recommended in this manual must be used with this equipment in order to comply with the limits for a digital device pursuant to Subpart B of Part 15 of FCC Rules.

For the customers in Canada

This apparatus complies with the Class A limits for radio noise emissions set out in Radio Interference Regulations.

Pour les utilisateurs au Canada

Cet appareil est conforme aux normes Classe A pour bruits radioélectriques, spécifiés dans le Règlement sur le brouillage radioélectrique.

For the customers in the United Kingdom

WARNING

THIS APPARATUS MUST BE EARTHED

IMPORTANT

The wires in this mains lead are coloured in accordance with the following code:

Green-and-yellow	Earth
Blue	Neutral
Brown:	Live

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows:

The wire which is coloured green-and-yellow must be connected to the terminal in the plug which is marked by the letter E or by the safety earth symbol Δ or coloured green or green-and-yellow.

The wire which is coloured blue must be connected to **the** terminal which is marked with the letter N or coloured black.

The wire which is coloured brown must be connected to the terminal which is marked with the letter **L** or coloured red.

--------------------	---------

Precautions

To take best advantage of the many features of this unit, note the following important points.

Usable cassette tapes (see page 3-3(E))

Use only metal cassette tapes with this unit. **Do** not use oxide tapes.

Reference video input (see page 3-5(E))

When recording or playing back videotapes on this unit, always input a composite video signal synchronized with the video signal to be used to the REF. VIDEO INPUT connector. Especially when recording and editing, failure to input a reference video signal to the REF. VIDEO INPUT connector will prevent the built-in time base corrector (TBC) from functioning correctly, causing picture breakup. Even if you are recording only audio signal or time code, do not fail to input a reference video signal.

Input video signal type selection (see page 4-5(E))

For recording, it is important that the VIDEO IN switch on the subsidiary control panel is correctly set to match the type of video signal input. In particular, when inputting a component signal, set this switch to the "Y-R,B" position, and set the component signal input connector selection switch on the rear panel to the appropriate position. If these switches are not set correctly, not only will recording not be possible, but the input signal will also not appear on the monitor.

Setting the cassette record-inhibit plug (see page 3-4(E))

Recording on a cassette is impossible when its record-inhibit plug is pushed in. If the record-inhibit plug is pushed in on the cassette you are going to use, either use a new tape, or pull out the plug and use the tape after making sure that it contains no important material.

Controlling tape transport remotely (see page 7-3(E))

The tape transport buttons on this unit are normally disabled when the REMOTE indicator is lit. However, you can use these buttons if you set the LOCAL ENABLE menu item to ALL ENABLE. The factory default setting for this item is STOP & EJECT.

Storing in a rack

When installing this unit in a standard 19-inch rack, you can stack up to three units in one rack. When stacking four or more units, be sure to leave space equivalent to **one** unit height, or 44.45 mm (1 3/4 inches) between units.

Chapter 1

Overview

This chapter overviews the features of the UVW-1800/1800P.

Features..... 1.2 (E)

The UVW-1800/1800P is a Betacam SP videocassette recorder, capable of recording and playing back composite video, component video and analog audio signals. With an external control unit connected, jog and shuttle functions are available, and the unit can be used as the recorder in an editing system.

Betacam SP format

Excellent video and audio characteristics

Compared with a conventional format, Betacam SP format provides better video and audio performance, with improved signal-to-noise ratio, frequency characteristics, and detail reproduction, and greatly enhanced overall video and audio quality.

Compatibility with other Betacam SP VTRs

A metal tape cassette recorded on this unit can also be played back on other Betacam SP VTRs. Again, metal tape cassettes recorded on other Betacam SP VTRs can be played back on the UVW-1800/1800P. The cassette size is detected automatically.

Full range of recording and playback functions

Built-in time code generator and reader

The built-in time code generator allows the unit to record time codes (LTC or user bits) simultaneously with the video and audio signals. The built-in time code reader allows the unit to read time codes (LTC or user bits) from a tape.

Built-in time base corrector (TBC)

The built-in time base corrector allows you to obtain a stable playback picture with no horizontal jitter or color fluctuation.

Microprocessor servo system

Four microprocessor-controlled DC motors provide direct drive for the drum, capstan and reels, enabling quick and accurate tape access.

Audio noise reduction

Longitudinal audio tracks 1 and 2 use the same Dolby C-type noise reduction²¹ as a conventional Betacam SP system. These circuits are always operating when recording or playing back.

1) Because this unit does not record the AFM carrier wave, noise may be heard when tapes recorded on this unit are played back by other VTRs in the BVW series. If necessary, lower the audio levels of channels 3 and 4 on the other VTR.

2) Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation. "DOLBY" and the double-D symbol DO are trademarks of Dolby Laboratories Licensing Corporation.

Other features

Compact, power-saving design

The unit is light and simple, and very energy-efficient.

Menu-based set-up system

All the initial settings for system operation conditions and so forth are accessed through a simple menu system, from the subsidiary control panel.

Remote control function

The unit can be operated from a remote control unit through the RS-422A serial interface.

It is also possible to use the CONTROL S connector on the front panel to connect a simple remote control unit (SIRCS type remote control unit such as an SVRM-100) to carry out search operations.

Digital hours meter

The digital hours meter keeps cumulative totals of four values: the total hours powered on, the drum rotation time, the tape running time, and the numbering of threading/unthreading operations. These are displayed as superimposed text on the video monitor.

Superimposed text output

The VIDEO 2 (SUPER) OUTPUT connector provides a monitor video output which can have various information (time codes, tape speed, system settings, etc.) superimposed on it. The superimpose function can be enabled or disabled as required.

S-Video connectors

With VTRs or other peripheral equipment having S-Video connectors, these connectors provide a high-grade interface for video signal transfer.

Self-diagnosis functions

If an operating fault occurs, the system attempts to diagnose the problem, and produces an error code on the time counter display and superimposed video output.

Alarm indications

If an erroneous operation or connection is made, the system superimposes information on the monitor screen giving nature of the error and actions to be taken. The cause of the problem is also indicated in the time counter display.

Chapter 2

Identification of Parts and Controls

This chapter lists the names of all the controls and other components used in the operation of the unit

Front Panel	2-2 (E)
Rear Panel	2-5 (E)

Front Panel

Front Panel

Tape transport section

a) The F.FWD/REW item under the AUTO EE SELECT menu item must be set to PB (see page 7-3(E)).

Tape transport section

Rear Panel

Rear Panel

Video inputs

Video inputs

Side control panel

Side control pane

Indicators

Indicators

Subsidiary control panel

The subsidiary control panel is behind a flap on the front panel. Open the flap as shown in the figure.

Pull the flap forward and down, then push into the panel.

Accessing the subsidiary control panel

● Switches, Controls and Adjusters

25 AUDIO INPUT LEVEL controls

These adjust the audio input levels for each of channels 1 and 2 when recording.

26 SC (subcarrier) adjuster

Adjust this when necessary to accurately adjust the subcarrier phase of the output signal (composite) of the unit with respect to the reference video signal.

27 SYNC adjuster

Adjust this when necessary to accurately adjust the sync phase of the output signal (composite) of the unit with respect to the reference video signal.

20 REMOTE/LOCAL switch

Selects whether the unit is controlled remotely from a device connected to the REMOTE connector on the rear panel, or locally from the control panel.

21 CTL/LTC/U-BIT switch

Selects the type of time data (CTL/LTC or user bits) displayed.

Note

When the REMOTE/LOCAL switch is set to REMOTE, this switch is ignored, and the selection is made from the external device connected.

22 VIDEO IN selector switch

Selects the type of video input signal for recording or playing back a component signal (the "Y-R,B" position), a composite signal (COMPOSITE position), or an S-VIDEO signal (S-VIDEO position).

23 CHARACTER switch

Determines whether or not character information such as time codes is superimposed on the video output signal from the VIDEO 2 (SUPER) OUTPUT connector.

24 TC (time code) IN selector switch

Selects whether the time code from the internal time code generator is used (INT position) or the time code input from an external source (EXT position).

● Menu, control, Time code, Digital Hours Meter Button

32 TC (time code) PRESET button

Press this button to preset the LTC or user-bit value shown on the time counter display.

For details of how to set time code values, see the section "Settings for Longitudinal Time Code and User Bits" (page 6-3(E)).

33 HOURS METER button

Pressing this button switches the information superimposed on the monitor screen to show the digital hours meter values. The time counter display also shows the hours meter information at the same time. Pressing the button again returns to the normal indications.

For details of the digital hours meter, see the section "Digital Hours Meter" (page 8-4(E)).

28 MENU button

Pressing this button displays menu options on the monitor screen and the time counter display. Pressing the button again returns to normal operating mode.

For details of menu operations, see the section "Menu Operations" (page 7-8(E)).

29 Arrow direction (⏮ ⏪ ⏩ ⏭) buttons

Use these buttons to move around the menu settings, and also for setting time code values.

For details of how to set time code values, see the section "Settings for Longitudinal Time Code and User Bits" (page 6-3(E)).

30 RESET (NO) button

This button resets menu settings to their factory defaults, resets a time code value to zero, and is also used for a negative response to a menu question.

31 SET (YES) button

This button confirms new menu or time code settings. It is also used for a positive response to a menu question.

Video outputs

Video outputs

Audio inputs and outputs

Audio inputs and outputs

Power, time code and control signals

Always power off the UVW-1800/1800P before connecting a remote control unit to the TBC REMOTE connector
(Load current: Max. 300mA)

Cassettes	3-3 (E)
Cassettes Which Can Be Used.	3-3 (E)
Inserting and Ejecting a Cassette.....	3-3 (E)
Record Inhibit Function.....	3-4 (E)
Reference Video Signals.....	3-5 (E)

Safety notes

Power supply

- Ensure that the unit is "connected to a power supply of the correct rating.
- Do not place any heavy objects on the power cord, and be careful not to damage the power cord. Using a damaged power cord is dangerous.
- When disconnecting the power cord, not pull the cord itself, hold the plug while pulling it out.

Do not dismantle the unit

Do not remove the casing. If you insert your hand there is a danger of electric shock.

Do not drop foreign objects into the casing

If flammable objects, metal objects, water or other undesirable substances enter the casing, this can be a cause of malfunction.

In the event of a malfunction

If there should be a strange sound or smell or smoke emanating from the unit, immediately power off the unit, and disconnect the power supply and all signal connections, then refer to your supplier or Sony service representative.

Notes on operation

Operation and storage locations

Avoid operation or storage in any of the following places.

- Locations subject to extremes of temperature (operating temperature range 5 °C to 40 °C (41 °F to 104 °F))
- Locations subject to direct sunlight for long periods, or close to heating appliances (Note that the interior of a car left in summer with the windows closed can exceed 50 °C (122 °F)).

Operate the unit in a horizontal position

This unit is designed to be operated in a horizontal position. Do not operate it on its side, or tilted through an excessive angle (exceeding 20 °).

Avoid violent impacts

Dropping the unit, or otherwise imparting a violent shock to it, is likely to cause it to malfunction.

Do not obstruct ventilation openings

To prevent the unit from overheating, do not obstruct the ventilation openings, by for example wrapping the unit in a cloth while it is in operation.

Care

If the casing or panel is dirty, wipe it gently with a soft dry cloth. In the event of extreme dirt, use a cloth steeped in a neutral detergent to remove the dirt, then wipe with a dry cloth. Applying alcohol, thinners, insecticides, or other volatile solvents may result in deforming the casing or damaging the finish.

Shipping

- Always remove the cassette before shipping the unit.
- Pack the unit in its original carton or equivalent packing, and take care not to impart violent shocks in transit.

Cassettes

Cassettes Which Can Be Used

This unit only accepts metal tapes.
Use the following 1/2-inch Betacam SP cassettes.

	Metal tape
Small (S) cassettes	BCT-5MA/10MA/20MA/30MA, UVWT-10MA/20MA/30MA
Large (L) cassettes	BCT-5MLA/10MLA/20MLA/30MLA/60MLA/90MLA, UVWT-60MLA/90MLA

Inserting and Ejecting a Cassette

Always check that the unit is powered on before attempting to insert or eject a cassette.

Inserting a cassette

Inserting a cassette

- 1 Turn the POWER switch on.
- 2 Check the following points, then insert the cassette.
 - The cassette must be inserted with the side that the tape is visible uppermost.
 - There must be no slack in the tape.
 - There must be no message "HUMID !" in the time counter display.

For details of how to remove slack in the tape, see the section "Removing slack in the tape" (on the next page).

If the message "HUMID !" appears in the time counter display, see Section "Condensation" (page 8-3(E)).

To insert a small cassette, align it with the marks on the cassette compartment.

The cassette is automatically drawn into the unit, and the tape wound round the head drum. The tape is stationary while the head drum rotates, and the STOP button lights.

Cassettes

Removing slack in the tape

Carefully retote one of the reels with your finger in the direction of the arrows until it stops.

Removing slack in the tape

No double insertion of cassettes

When you insert a cassette, the orange lock-out plate appears in the cassette compartment to prevent double insertion.

Ejecting the cassette

Press the EJECT button.

The tape is wound back into the cassette (this takes several seconds), and then the cassette is ejected from the unit.

If the time counter display is showing CTL values, it is reset.

Record Inhibit Function

To protect recorded material which you wish to keep, press in the record-inhibit plug on the cassette.

Record-inhibit plug

When you insert a cassette with the record-inhibit plug pushed in into the cassette compartment, the REC INHIBIT indicator lights, and it is not possible to record.

To re-record on the cassette, return the record-inhibit plug to its original position.

Reference Video Signals

When this unit is being used, a composite video signal, synchronized to the signal being used must be input to the REF. VIDEO INPUT connector to enable the time base corrector (TBC) to operate correctly, and ensure stable operation.

If no reference video signal is input, then during recording or editing, or in EE mode the monitor screen will tend to drift vertically, as shown in the figure below.

The monitor screen and the time counter display also show alarm messages. (Example: When the VIDEO 2 (SUPER) OUTPUT connector is used with the "REF. ALARM" set to ON in the menu.)

During playback, a monitor picture is normally stable without a reference video signal input.

For details of changing the menu settings, **see the** section "Menu Operations" (page 7-8(E)).

Chapter 4

Recording and Playback

This chapter describes the preparation necessary before using the unit for recording or playback, including connections and switch settings, and basic operating procedures. It also describes the text information which can be superimposed on the monitor screen.

Playback Operation	4-2 (E)
Preparation for Playback.....	4-2 (E)
Playback Operation.....	4-3 (E)
Recording Operation.....	4-4 (E)
Preparation for Recording.....	4-4 (E)
Recording Operation.....	4-6 (E)
Superimposed Text Information	4-7 (E)

Playback Operation

This section describes the connections, switch settings, and basic operating procedures for playback of both video and audio signals.

Preparation for Playback

Connect the unit to the monitor and make the switch settings as shown in the following figure.

a) The VIDEO IN connectors of the PVM-1444Q are provided with automatic termination function.

Connections and switch settings

Playback Operation

Operation

- 1 Insert a cassette.

The STOP button lights, then a few seconds later the tape is ready to start running. At this point a still picture appears on the monitor. Always be sure to use a metal tape.

- 2 Press the PLAY button.

Playback begins.

To stop playback

Press the STOP button.

This puts the UVW-1800/1800P into stop mode. This unit automatically enters standby-off mode if it is left in stop mode for eight minutes.

You can change the time to switch to stand-by off mode in the TAPE PROTECTION menu. For details, see under "TAPE PROTECTION" (page 7-6(E)).

If the tape reaches the end during playback

The tape is automatically rewound to the beginning and the unit stops. You can disable this automatic rewind function using the menu.

For details, see "AUTO REW" (page 7-3(E)).

Adjusting the audio playback volume

Carry this out on the monitor.

Simple search function

With the F. FWD/REW item in the AUTO EE SELECT of OPERATIONAL FUNCTION menu set to PB, holding down the F FWD or REW button provides a monochrome search function at 16 times normal speed in the toward or reverse direction respectively. Press the PLAY button again to return to normal playback.

Recording Operation

Preparation for Recording

[illegible]

Connections

CB3

If you do not input a reference video signal, the monitor picture will be subject to vertical instability. When carrying out recording, always input a reference video signal.

For details of reference video signals, see the Section "Reference Video Signals" (page 3-5(E)).

Switch and control settings

After completing the connections, make the switch and control settings as follows.

Switch and control settings

- I Power on the video monitor.
- 2 Set the input selector of the monitor to the input connector connected to the U VW-1800/1800P.
- 3 Following the instructions in the appropriate operation manual, and prepare the player for playback.
- 4 Power on the U VW-1800/1800P.
- 5 Set the VIDEO IN selector switch to **Y-RJB**.
- 6 Set the time counter display selector switch according to the time data to be used.
- 7 Adjust the AUDIO INPUT LEVEL controls so that the audio level meters indicate around 0 VU when the audio signal is at its maximum.

Recording Operation

Recording Operation

In order to carry out recording of the video and audio signals, check that you have made the connections and carried out the switch setting procedure correctly, then use the following procedure.

Operation

- 1 Insert a cassette in the UVW-1800/1800P.

Always be sure to use a **metal tape**.

Before inserting the cassette, check that it is not record-inhibited.

For details see the Section "Record Inhibit Function" (page 3-4(E)).

- 2 Check that the REC INHIBIT indicator is not lit.
- 3 Hold down the REC button, and press the PLAY button.
Recording starts.
- 4 Press the PLAY button on the player.
Playback starts.

To stop recording

Press the STOP button.

Superimposed Text Information

When the subsidiary control panel CHARACTER switch is in the ON position, the video signal output from the VIDEO 2 (SUPER) OUTPUT connector includes superimposed indications of time data and the operating state of this unit.

Selecting the information displayed and the character type and position of the indications

The information displayed and the character type and position of the indications can be selected by using the menu item "DISPLAY CONTROL." The factory default settings are as follows.

- Information displayed** : Time data selected by the time counter display selectic switch, and the operating status of the unit
- Character type** : White characters on a black background
- Character position** : Bottom center of the screen

For details of the setting method, see under "DISPLAY CONTROL" (page 7-4(E)).

Displayed information (factory default)

1Type of time data

This indicates the type of time data as follows.

Indication	Meaning
CTL	CTL counter data
TCR	LTC reader data
UBR	LTC reader user bit data
TCG	Time code data from time code generator
UBG	User bit data from time code generator
T*R	Time code data from time code reader. Interpolated by the time code reader to make up for the time code data not correctly read from the tape.
U*R	User bit data from time code reader. Last data is retained by the time code reader, as the new data has not been read correctly from the tape.

Superimposed Text Information

Drop-frame indication for time code reader (onUVW-1800only)

- " . " : A single dot indicates drop-frame mode.
" : " : Two dots (i.e. a colon) indicate non-drop-frame mode.

Drop-frame indication for time code generator (onUVW-1800only)

- " . " : A single dot indicates drop-frame mode.
" : " : Two dots (i.e. a colon) indicate non-drop-frame mode.

QUVW-1800/1800P operating status

Indication		Operating status
THREADING		Cassette is inserted, and tape is being threaded.
UNTHREADING		Tape is being unthreaded to eject cassette.
CASSETTE OUT		No cassette is inserted.

Chapter 5

Editing

By connecting two or more UVW-1800/1800P units or using UVW-1600/1600P units as players, and connecting an editing control unit such as a PVE-500 it is possible to assemble an editing system; the UVW-1800/1800P can be used as the recorder in such an editing system. This section describes the connections required for cut editing and for A/B roll editing, and the phase adjustments required for editing.

Cut Editing	5-2 (E)
A/B Roll Editing.....	5-6 (E)
Phase Adjustments	5-11 (E)

Cut Editing

The figure below illustrates a system for cut editing using the UVW-1800/1800P with a UVW-1600/1600P.

*For details of editing operations, refer to the operation manual for the editor being used.
For details of the connections and settings on each of the other pieces of equipment, refer to the respective operation manuals.*

When this unit is connected to the editor as a recorder and the UVW-1600/1600P as a player, setting the editor for assemble edit or insert edit automatically causes the EDIT MODE indicators on the recorder and player to light up, which indicates that recorder and player have been put into editing mode.

Example configuration of system for cut editing (component signals)

Switch settings on the UVW-1800/1800P (recorder) and UVW-1600/1600P (player)

Switches	UVW-1800/1800P	UVW-1600/1600P
REMOTE/LOCAL switch	REMOTE	REMOTE
VIDEO IN selector switch	Y-R, B	—
Component input connector selection switch	1	—
AUDIO INPUT 600 Ω ON/OFF switch	ON	—
REF. VIDEO 75 Ω termination switch	ON	OFF

Monitoring the video signals

To monitor the video signals, connect monitors as shown in the figure below. The connections are the same for the recorder and player.

To obtain superimposed information on the monitor screen, set the CHARACTER switch to the ON position.

Connecting a video monitor

Cut Editing

Reference video signal and editor connections

Reference video signal and editor connection

Video and audio signal connections

Using BNC cable and VDC-C5 dubbing cable

Video and audio signal connection 1

Using BNC cables

Video and audio signal connection 2

A/B Roll Editing

The figure below illustrates a system for A/B roll editing using the **UVW-1800/1800P** with two **UVW-1600/1600P** units.

Example configuration of system for A/B roll editing (component signals)

Switch settings on the UVW-1800/1800P (recorder) and UVW-1600/1600P (player)

Switches	UVW-1800/1800P	UVW-1600/1600P
REMOTE/LOCAL switch	REMOTE	REMOTE
VIDEO IN selector switch	Y-R, B	—
Component input connector selection switch	1	—
AUDIO INPUT 600 Ω ON/OFF switch	ON	—
REF. VIDEO 75 Ω termination switch	ON	ON

Monitoring the audio and video signals

To monitor the audio signals, connect speakers as shown in the figure below.

For details of video monitor connections, see the section "Monitoring the video signals" under "Cut Editing" above (page 5-3(E)).

Connecting speakers

A/B Roll Editing

Reference video signal connections

Reference video signal connections

Control signal connections

Control signal connections

A/B Roll Editing

Video and audio signal connections

Video and audio signal connections

Phase Adjustments

When using two or more players, as in an A/B roll editing system, phase synchronization of the signals (i.e. system sync) is necessary and for composite signals only, the subcarrier phase must also be in sync. If not, picture instabilities or color break-up may occur at edit points. After configuring the editing system, use a Vectorscope to adjust the sync and subcarrier phase of the recorder and players. Subcarrier phase adjustment is necessary only when using composite signals.

Connections for phase adjustment

Phase adjustment procedure

- 1 Press the SCH button on the Vectorscope.
The Vectorscope switches to "SCH" mode.
- 2 Press the B channel button on the Vectorscope.
This displays the black burst signal from the switcher.
- 3 Press the EXT button on the Vectorscope.
This switches the Vectorscope to external synchronization mode.

(Continued)

Phase Adjustments

- 4 Adjust the phase synchronization control on the Vectorscope so that the sync and subcarrier phases are close to the reference line.

- 5 Output the player 1 signal from the PVE-500.

- 6 **Press the A channel button on the Vectorscope.**

This displays the sync phase **and subcarrier phase (composite signals only)** of the signal from player 1.

- I On the subsidiary control panel of player 1, adjust the SYNC and SC adjustment controls, using a Phillips screwdriver, so that the output from player 1 on channel (A) is in correct phase alignment with the black burst signal on channel (B).

Note

When component signals are used the subcarrier phase does not appear.

- 8 Output the player 2 signal from the PVE-500.

Repeat steps 6 and 7 to adjust the sync and subcarrier phase of the output from player 2.

Chapter 6

Time Data

The time data used by the UVW-1800/1800P for both recording and display include CTL signal count values, longitudinal time codes (LTC), and user bit data. This chapter describes how to display time data, and how to set LTC and user bit values.

Displaying Time Data	6-2 (E)
Settings for Longitudinal Time Code and User Bits ...	6-3 (E)
Synchronizing the Internal Time Code Generator	
With an External Time Code Generator.....	6-6 (E)

Displaying Time Data

During recording or playback, you can display the time data selected on this unit on the monitor and on the time counter display. During editing, the data displayed is selected by the editor.

On the time counter display

Use the time counter display selector switch to select the data to be displayed on the time counter display.

Time counter display selector switch

Resetting the CTL data displayed

Press the RESET button.

The indication in the time counter display is reset to "0:00:00:00".

On the monitor screen

See the section "Superimposed Text Information" (page 4-7(E)).

Settings for Longitudinal Time Code and User Bits

Using the internal time code generator it is possible to preset the longitudinal time code (LTC) value to be recorded on the tape to any desired initial value. This section describes how to preset the LTC value, and also how to preset the user bit data which is also written on the same track.

Switch and menu settings

Carry out the following switch and menu settings.

Switch settings

Menu settings

Mode	Setting
RUN MODE	"FREE RUN" or "REC RUN"
DF MODE (for UVW-1800 only)	Normally "DF"

For details of the RUN MODE and DF MODE settings, see under "TIME CODE" (page 7-5(E)).

Settings for Longitudinal Time Code and User Bits

Setting procedure

Setting the initial value for time code or user bits

- 1 Set the time counter display selector switch to LTC or U-BIT, to display the required time data on the monitor and time counter display.
- 2 Press the TC PRESET button.

The current setting is displayed on the monitor screen and the time counter display. At this point the leftmost digit flashes.

One of the following displays appears on the monitor screen.

Time code presetting

User bit presetting

Note

If you press the TC PRESET button while CTL value is displayed, the following alarm message appear on the monitor screen.

Set the time counter display selector switch to LTC or U-BIT.

- 3 Use the  and  buttons to select the digit in the value which is flashing.
- 4 Use the  and  buttons to adjust the value of the flashing digit.
Note that user bit data values are in hexadecimal (digits 0-9 and A-F).
- 5 Repeat steps 3 and 4 as required to set the required value.
To set the value to 00:00:00:00, press the RESET (NO) button.
- 6 Press the SET (YES) button.

Either of the two displays shown immediately below appears on the monitor screen and the third display shown below in the time counter display.

Once the setting is saved, the monitor screen and time counter display return to normal.

Note

If you power off this unit while it is in the process of saving the settings, settings may be lost. Wait until saving is completed before powering the unit off.

Internal time code generator running modes

There are two different modes of operation for the internal time code generator, selected by the RUN MODE setting as follows.

"FREE RUN": The time code generator begins to run from the instant the preset value is saved.

"REC RUN": The time code generator runs only during recording.

Presetting the time data value to reflect real time

In the menu, set RUN MODE to "FREE RUN", and set the time data value to the current time.

Synchronizing the Internal Time Code Generator With an External Time Code Generator

If a time code signal (LTC values) is input to this unit, the internal time code generator is automatically synchronized to the time code value input from an external source. Using this function, it is possible to have a number of VTRs all set to synchronized time codes, and to copy time codes precisely from one tape to another.

Connections and switch settings

Carry out the following connections and switch settings.

Connections and switch settings

When an external time code is input, the running mode of the internal time code generator is as follows.

RUN MODE: Automatically set to "FREE RUN."

DF MODE (for UVW-1800 only): Automatically set to either drop-frame mode or non-drop-frame mode according to the mode of the input time code.

After setting the TC IN selector switch to EXT position, the internal time code generator begins to run in synchrony with the external time code generator. The internal time code generator continues to run in the same way even if the external time code generator is disconnected.

Checking the internal time code generator counting

Stop the tape, and press the REC button.

Check that the same value as the input time code value is displayed.

Chapter 7

Menus

This chapter describes the organization of the principal set-up menus (selecting the superimposed information on the monitor screen, time code, run mode, etc.) and how to use them.

Menu Organization.....	7-2 (E)
Hierarchical Structure	7-2 (E)
Menu Screens.....	7-3 (E)
Menu Operations	7-8 (E)
Buttons Used to Change the Setting	7-8 (E)
Operation Sequence	7-9 (E)

Menu Organization

Hierarchical Structure

The menu screens are arranged in a three-level tree structure, as shown in the figure below. The top-level selections (level 1) access the main divisions of the settings, and except for the MENU GRADE item, the settings themselves are made on levels 2 and 3. The screens are divided into two groups: the basic settings, to which frequent access is normally required, and extended settings, which are less frequently used.

In the following figure, bold lines indicate the basic menu screens, and thin lines the extended menu screens.

Menu organization

Menu Screens

The table below lists the menu screens and explains the meaning of each setting. In the table the following conventions are used:

- Factory default settings are preceded by an asterisk (*).
- Each indication appears twice: the upper version is what appears on the monitor screen, and the lower version in parentheses appears on the time counter display.
- The time counter display indications are preceded by a number of angle brackets: '>' indicates an item in a level 2 menu, and '>>' and '>>>' indicate an item or a parameter in a lower level menu.

Menu selections

OPERATIONAL FUNCTION: Operation settings (Operational)		Description of settings
AUTO EE SELECT (> Auto EE) Determine whether the unit enters EE mode or PB mode when audio and video signals from other equipment are input. When this unit is used as the recorder for cut editing, it is possible to output the input audio and video signals to the monitor. The term "EE" mode is used to refer to this feature, which enables the entire editing operation to be carried out with a single monitor.	CASSETTE OUT (>> Cass. Out) When the cassette has been ejected	* EE (>>> EE): Output audio and video signal input from other equipment PB (>>> PB): Mute audio and video signal input
	F. FWD/REW^{a)} (>> F. FWD/REW) Operations when in fast forward or rewind mode	EE (>>> EE): Output audio and video signal input from other equipment * PB (>>> PB): Mute audio and video signal input
	STOP (>> STOP) Operations when in stop mode	EE (>>> EE): Output audio and video signal input from other equipment * PB (>>> PB): Output audio and video signal recorded on a tape
	STANDBY OFF (>> STBY OFF) Operations when in standby off mode	EE (>>> EE): Output audio and video signal input from other equipment * PB (>>> PB): Mute audio and video signal input
LOCAL ENABLE (> Local ENA) Select which of the tape transport control buttons (EJECT, REW, PLAY, F. FWD, STOP and REC) operate when the REMOTE/LOCAL switch is set to REMOTE.		ALL DISABLE (>> ALL DIS): All of the tape transport control buttons are disabled. * STOP & EJECT (>> STOP&EJ): Only the STOP and EJECT buttons are enabled. ALL ENABLE (>> ALL ENA): All of the tape transport control buttons are enabled, and settings such as preroll time change or time data display selection are effective.
MAX SRCH SPEED (> Max SRCH) Maximum search speed		*x35 (>> x35) (for UVW-1800) or x42 (>> x42) (for UVW-1800P): Allow searching at up to the maximum tape transport speed of 35 or 42 times normal. The picture cannot be seen on the monitor at this speed. * x16 (>> x16): Restrict the search speed to the maximum 16 times normal for which the picture can be seen on the monitor. Use this setting when using search mode for cuing.
AUTO REW (> AUTO REW) Whether to rewind automatically when playback reaches the end of a tape		* ENABLE (>> ENABLE): Rewind automatically. DISABLE (>> DISABLE): Do not rewind automatically.
PREROLL TIME (> Preroll)		Set the preroll time in seconds, from 0 to 15. If a PVE-500 or other editing control unit is connected, this setting is ignored, and the editing control unit setting takes precedence. 0 SEC (>> 0 sec) – 5 SEC (>> 5 sec) – 15 SEC (>> 15 sec)

a) **Note**

(Continued)

Set this item to PB when you want to use the F FWD and REW buttons to view playback at 16 times normal speed. If this item is set to EE, holding down the F FWD and REW buttons produces EE pictures.

Menu Organization

Menu selections (continued)

OPERATIONAL FUNCTION: Operation settings (Operational)	Description of settings
AFTER CUE-UP (> After Cue) Operating mode after cue-up	*STOP (>> STOP): Stop mode STILL (>> STILL): Search mode still
CUT-IN FIELD (> CUT-IN FIELD) Field timing for beginning editing	*1ST FIELD (>> 1 FLD): Begin editing on the 1st field and end on the 2nd field. 2ND FIELD (>> 2 FLD): Begin editing on the 2nd field and end on the 1st field. 1ST/2ND FIELD (>> 1/2 FLD): Use the timing command sent from the editing control unit.
PLAY START (> Play start) Timing for switching to playback mode from stop. In an editing system including an editor such as a PVE-500 editing control unit, adjusting this setting so that the delay before switching to playback mode is the same on all the decks of the editing system means that there is no longer a need to synchronize the decks for editing, and the preroll time can be shortened.	16 FRAME DELAY (>> 16 delay) – 4 FRAME DELAY (>> 4 delay): The larger the numerical value, the longer the delay. By adjusting this setting, it is possible to reduce the phase synchronization time and preroll time during editing. UVW-1800: * 5 FRAME DELAY (>> 5 delay) UVW-1800P: * 4 FRAME DELAY (>> 4 delay)
STEP SEARCH (> Step SRCH) Determine whether or not the tape is transported in units of fields during low-speed playback.	*OFF (>> OFF): Transport the tape regardless of fields. During still playback, guard bands (noise bars) can appear at any location in the picture. ON (>> ON): Transport the tape in units of fields. During still playback, guard bands (noise bars) appear along the upper and lower edges of the picture.
DISPLAY CONTROL: Settings related to indications (Display)	Description of settings
CHARA. POSITION (> Chara pos) Position of text superimposed on output from VIDEO 2 (SUPER) OUTPUT connector to monitor Note If time code values which appear superimposed on the monitor screen are to be recorded on another VTR, position them in the lower two-thirds of the screen. Time code values displayed in the top one-third of the monitor screen may appear to be delayed by one frame.	Default is bottom center of screen. Use the arrow direction keys to adjust the indication position while watching the monitor. Press the MENU button to confirm the setting and return to the level 1 menu.
CHARA. TYPE (> Chara type) Type of characters in text superimposed on output from VIDEO 2 (SUPER) OUTPUT connector to monitor	*WHITE (WITH BKGD) (>> White): White characters on black background BLACK (WITH BKGD) (>> Black): Black characters on white background WHITE (OUTLINE) (>> W/outline): White characters with black outline BLACK (OUTLINE) (>> B/outline): Black characters with white outline Press the MENU button to confirm the setting and return to the level 1 menu.
DISPLAY INFO (> DISP Info) Information superimposed on output from VIDEO 2 (SUPER) OUTPUT connector to monitor Note When the TIME DATA & UB or TIME DATA & CTL setting is selected, the lower time data may appear to be delayed by one frame from the upper value.	*TIME DATA & STATUS (>> Time & STA): Time data and operating status TIME DATA & UB (>> Time & UB): Time data selected using the time counter display switch and user bit value (when user bit is selected with the time counter display switch, user bit and LTC value) TIME DATA & CTL (>> Time & CTL): Time data selected using the time counter display switch and CTL value (when CTL is selected with the time counter display switch, CTL and user bit value) TIME DATA (>> Time): Time data only

Menu selections (continued)

DISPLAY CONTROL: Settings related to indications on the monitor and the unit (Display)	Description of settings
PEAK HOLD (> Peak hold) Peak hold time for audio level meters	Set the time from zero (OFF) to 1.5 seconds in steps of 0.1 second. 1.5 SEC (>> 1.5 sec) – * OFF (>> OFF)
BRIGHTNESS (> Brightness) Brightness of front panel indicators	Set brightness as a percentage of the maximum. * 100% (>> 100%) 66% (>> 66%) 33% (>> 33%)
ALARM (> ALARM) Determine whether alarms are issued or not.	* ON (>> ON): Alarms are issued. OFF (>> OFF): Alarms are not issued.
REF. ALARM (> REF. ALARM) Determine whether alarms related to reference video signal are issued or not.	ON (>> ON): Alarms are issued. * ON (LIMITED) (>> ON (Limit)): Alarms are issued in recording, editing and EE mode. OFF (>> OFF): Alarms are not issued.
TIME CODE: Settings related to the time code (Time code) generator	Description of settings
RUN MODE (> RUN mode) Run mode of the time code generator. Note Set to "FREE RUN" when carrying out editing with an editor. With the "REC RUN" setting, assemble editing and other operations will not be carried out correctly.	* FREE RUN (>> FREE RUN): Time code generator keeps running. REC RUN (>> REC RUN): Time code generator only runs while recording.
DF MODE (only on UVW-1800) (> DF mode) Select whether the time code generator and CTL counter operate in drop-frame or non-drop-frame mode. Normally select drop-frame mode, to keep in sync with real time. The non-drop-frame mode is useful for example when using computer graphics, and working on a frame count basis.	* ON (DF) (>> ON DF): Drop-frame mode OFF (NDF) (>> OFF NDF): Non-drop-frame mode
UB BINARY GP. (> UB BINARY Gp) (for UVW-1800) Select the user bit binary group flag of the time code generator. Note When the TC IN switch is set to EXT, the user-bit binary group flag setting follows the setting in the time code input to the TIME CODE IN connector.	* 000 (>> 000): Character set not specified 001 (>> 001): 8-bit characters conforming to ISO646 and ISO2022 010 (>> 010): Undefined 011 (>> 011): Undefined 100 (>> 100): Multi-cassette 101 (>> 101): Multiplex 110 (>> 110): Alternate 111 (>> 111): Undefined
UB BINARY GP. (> Binary Gp) (for UVW-1800P) Note When the TC IN switch is set to EXT, the user-bit binary group flag setting follows the setting in the time code input to the TIME CODE IN connector.	* 00 (>> 00): Not specified 01 (>> 01): ISO character 10 (>> 10): Unassigned-1 11 (>> 11): Unassigned-2

(Continued)

Menu Organization

Menu selections (continued)

TIME CODE: Settings related to the time code generator (Time code)		Description of settings
PHASE CORR. (> PHASE CORR.) Time code generator phase correction		* OFF (>> OFF): Phase is not corrected. ON (>> ON): Phase is corrected.
CF FLAG (> CF flag) Set color framing flag on or off in a unused bit of time code data Note This setting relates only to the control of the CF flag bit in the internal time code generator of this unit. It has no effect on normal color framing.		* OFF (>> OFF): Set color framing flag off. ON (>> ON): Set color framing flag on.
TAPE PROTECTION: Settings related to tape protection (Tape protect)		Description of settings
FROM STOP (> From STOP) Protected mode and time to switch from stop mode for protection of the tape and head drum	STOP TIMER (>> STP Timer) Time to switch to protected mode from stop mode	Select time from 15 settings from 0.5 seconds to 30 minutes. 30 MIN (>>> 30 min) – * 8 MIN (>>> 8 min) – 0.5 SEC (>>> 0.5 sec)
	NEXT MODE (>> Next mode) Tape protection mode when time set in STOP TIMER setting elapses Note When this unit is in tension release mode, the drum is still rotating, so the picture can be monitored. In tension release mode, though the unit is also in "standby on" mode (i.e. is on standby), so if the distinction between "standby on" and "standby off" is important (for example when broadcasting), care should be taken over the setting.	* STANDBY OFF (>>> STANDBY): Standby off mode TENSION RELEASE (>>> T. RLSE): The tape tension is released, but the picture can still be seen on the monitor.
FROM STILL (> From STILL) Protected mode and time to switch from search mode still or pause for protection of the tape and head drum	STILL TIMER (>> STL timer) Time to switch to protected mode from search mode still or pause	Select time from 15 settings from 0.5 seconds to 30 minutes. 30 MIN (>>> 30 min) – * 8 MIN (>>> 8 min) – 0.5 SEC (>>> 0.5 sec)
	NEXT MODE (>> Next mode) Tape protection mode when time set in STILL TIMER setting elapses Note When this unit is in tension release mode, the drum is still rotating, so the picture can be monitored. For both the STEP FWD and TENSION RELEASE settings, the unit is also in "standby on" mode (i.e. is on standby), so if the distinction between "standby on" and "standby off" is important (for example when broadcasting), care should be taken over the setting.	* STEP FWD (>>> Step): The tape is advanced at $\times 1/30$ speed for 2 seconds. STANDBY OFF (>>> STANDBY): Standby off mode TENSION RELEASE (>>> T. RLSE): The tape tension is released, but the picture can still be seen on the monitor.

Menu selections (continued)

VIDEO CONTROL: Settings related to video control (Video)	Description of settings	
TBC DELAY (> TBC delay) Time base corrector delay in video EE mode or editing mode Note When used as the recorder of an editing system, select SYNC DELAY; when broadcasting, select VIDEO DELAY.	* SYNC DELAY (>> Sync): The synchronization signal included in the output video signal is delayed from the reference signal by the operating time of the TBC, and output synchronized to the video signal. VIDEO DELAY (>> Video): The synchronization signal included in the output video signal is synchronized to the reference signal, and only the video signal output is delayed.	
BLANKING LINE (>BLK line) Determine whether or not to output video signals during blanking. Settings can be made for each of the lines between line 12 and 20 for UVW-1800, and between line 9 and 23 for UVW-1800P.	UVW-1800: 12 LINE (>> 12 line) –20 LINE (>> 20 line) UVW-1800P: 9 LINE (>> 9 line) –23 LINE (>> 23 line)	* MASK(>>> Mask): Video signal is not output. HALF(>>> Half): Only a half of video signal (only for line 20 on UVW-1800, and only for line 23 on UVW-1800P) is output. OUTPUT(>>> Output): Video signal is output.
BLANKING DECODE (> BLK decode) Determine a method of separating input composite video signals into a luminance signal and chrominance signal during blanking. Settings can be made for each of the lines between line 12 and 19 for UVW-1800, and between line 9 and 22 for UVW-1800P.	UVW-1800: 12 LINE (>> 12 line) –19 LINE (>> 19 line) UVW-1800P: 9 LINE (>> 9 line) –22 LINE (>> 22 line)	* BLACK & WHITE (>>> B&W): Input signals are processed as black and white signals. BPF(>>> BPF): Input signals are processed with a band-pass filter.
MENU GRADE: Menu screen selection (Menu grade)	Description of settings	
—	* BASIC (> Basic): Display basic menu screens. ENHANCED (> Enhanced): Display extended menu screens.	

Menu Operations

Although the menu screens are divided into basic and extended categories, the method of operation is the same.

This section describes as an example the procedure required to change the setting for the tape protection mode used when the deck is stopped. Check the location of this setting in the menu tree, by referring to the previous section; it is in the level 2 menu screen "TAPE PROTECTION", which is an extended menu screen.

Buttons Used to Change the Setting

This operation uses the following buttons on the subsidiary control panel.

Buttons used to change the menu setting and their functions

MENU button	• Entering menu mode • Leaving menu mode
↑ ↓ buttons	Moving the reverse video cursor up and down to change the selection within a menu screen; if held down, the reverse video cursor continues to move.
← → buttons	• The ← button moves to the menu at the next lower level. • The → button moves to the menu at the next higher level. If either button is held down, the reverse video cursor continues to move.
RESET (NO) button	• Returns a setting to its factory default. • Answers 'no' to a question on the monitor screen.
SET (YES) button	• Confirms a changed setting. • Answers 'yes' to a question on the monitor screen.

Operation Sequence

Displaying the extended menus

Displaying the extended menus

- 1 Press the MENU button.

The level 1 menu appears on the monitor screen. The factory default setting is basic menu screens only.

The reverse video cursor shows the current selection; in the figure below, this is "OPERATIONAL FUNCTION." The -> mark indicates this item has an associated submenu.

The time counter display shows the selected item only, often in abbreviated form.

Level 1 menu display (basic menu screen)

The "MENU GRADE" setting has no associated submenus. In such a case, the current setting also appears in abbreviated form to the right of the screen. When the factory default setting is currently selected, the ":" indication precedes that setting. In this case the setting does not appear on the time counter display.

(Continued)

Menu Operations

- 2 Press the  button to select "MENU GRADE :BASIC".

Selecting MENU GRADE :BASIC

- 3 Press the  button.

This displays all of the settings, and the current selection appears on the monitor screen in reverse video. The <— mark indicates the "BASIC" has an associated menu at the next higher level. The "*" indication precedes the factory default setting.

Displaying the settings

- 4 Press the  button to select "ENHANCED".

Selecting ENHANCED

5 **Press** the SET (YES) button.

The messages shown below appear in the monitor screen and the time counter display, and the new setting is saved in memory.

Messages when saving settings

Once the saving operation is completed, both the monitor screen and time counter display return to the normal state.

Notes

- If you power off this unit while it is in the process of saving the settings, settings may be lost. Wait until saving is completed before powering the unit off.
- If you do not press the SET (YES) button, and press the MENU button, the settings are not saved; the displays shown below appear for 0.5 seconds, and the menu system is forcibly exited. If making more than one setting, be sure to press the SET (YES) button after finishing all the desired settings.

Forcibly aborting the menus

Menu Operations

Changing the "NEXT MODE" setting

Changing the NEXT MODE setting

- I Press the MENU button.

The level 1 extended menu appears on the monitor screen.

The reverse video cursor shows the current selection, "MENU GRADE

- ENHAN", made in the previous section. When the currently selected setting is not the factory default setting, the "•" indication instead of the ":" indication precedes that setting.

Level 1 menu display (extended menu screen)

- 2 Press the button to select "TAPE PROTECTION".

- 1 Press the  button.

The level 2 menu screen appears.

When this menu appears *for the first time*, "FROM STOP" is selected.

Level 2 menu screen (TAPE PROTECTION)

- 4 Press the  button to select "FROM STILL".

Selecting FROM STILL

- 5 Press the  button.

The level 3 menu screen appears.

When this menu appears *for the first time*, "STILL TIMER" is selected.

Level 3 menu screen (FROM STILL)

(Continued)

Menu Operations

- 6 Press the  button to select "NEXT MODE".

Selecting NEXT MODE

- 7 Press the  button.

The settings for "NEXT MODE" appear.

When this menu screen appears for the first time, "STEP FWD" is selected.

Setting screen display

- 8 Press the  button to select "TENSION RELEASE".

Selecting TENSION RELEASE

9 Press the SET (YES) button.

The "Saving" message appears on the monitor (as shown below), and the new setting is saved in memory.

Messages when saving settings

Once the saving operation is completed, both the monitor screen and time counter display return to the normal state.

Notes

- If you power off this unit while it is in the process of saving the settings, settings may be lost. Wait until saving is completed before powering the unit off.
- If you do not press the SET (YES) button, and press the MENU button, the settings are not saved; the displays shown below appear for 0.5 seconds, and the menu system is forcibly exited. If making more than one setting, be sure to press the SET (YES) button before moving to the next item.

Forcibly aborting the menus

Menu Operations

Returning menu settings to the factory default

Returning a specific menu setting to its factory default

In the screen for making the setting, press the RESET (NO) button.

In the example above of the "NEXT MODE" setting, press the RESET (NO) button in step 8 to return to the factory default of "STANDBY OFF".

Returning all menu settings to the factory default

- 1 Press the MENU button to display the level 1 menu.
- 2 Press the RESET (NO) button.

The following message appears on the monitor screen, which is intended to the user to confirm the reinitialization.

Request for confirmation of reinitialization

- 3 Press the SET (YES) button.

This returns all menu settings to their factory defaults. The "Saving" message appears on the monitor, and the new setting is saved in memory.

Notes

- If you power off this unit while it is in the process of saving the settings, the reinitialization can not be ensured. Wait until saving is completed before powering the unit off.
- If instead of pressing the SET (YES) button, you press the RESET (NO) button, the reinitialization is not carried out, and the display returns to the level 1 menu screen.

Chapter 8

Maintenance

This chapter describes the self-diagnosis functions with which the UVW-1800/1800P is provided, the action to be taken in the event of condensation on the head drum, the digital hours meter, and the head-cleaning process needed to ensure high video and audio reproduction quality.

Self-Diagnosis Functions	8-2 (E)
Condensation.....	8-3 (E)
Regular Checks and Maintenance	8-4 (E)
Digital Hours Meter.....	8-4 (E)
Head Cleaning	8-5 (E)

Self-Diagnosis Functions

The UVW-1800/1800P is provided with self-diagnosis functions which detect internal faults. If a fault is detected, the UVW-1800/1800P displays an error code in the time counter display and an error message on the monitor screen.

To display error messages on the monitor screen, the monitor must be connected to the VIDEO 2 (SUPER) OUTPUT connector, and the CHARACTER switch on the subsidiary control panel must be in the ON position.

When an error message appears on the monitor screen, follow the direction displayed.

Condensation

If the unit is suddenly moved from a cold to a warm location, or used in a very humid place, moisture from the air can condense on the head-drum. If the tape is run in this state, the tape may stick to the drum, in which case it is highly likely to be damaged. To lessen the risk of this occurring, this unit is fitted with a condensation detection system.

If moisture condenses on the head-drum while the unit is operating

The indication "HUMID !" appears in the time counter display. The following indication also appears on the monitor.

Condensation warning indication

If this happens, the cassette is ejected automatically.

Before resuming the operation, wait until the alarm message disappears, without turning the unit off.

If the condensation warning appears immediately after powering on

Leave the unit powered on and wait until the indication disappears. While the indication is present, it is not possible to insert a cassette.

Once the warning indication disappears, the unit is ready for use.

Regular Checks and Maintenance

Digital Hours Meter

The digital hours meter keeps a cumulative count of the total operating time, the drum rotation time, the tape transport operating time, and the number of threading and unthreading operations. These counts can be displayed on the monitor and time counter display; use them as guidelines for scheduling maintenance. Consult your Sony service representative about necessary periodic maintenance checks.

Digital hours meter indications

The digital hours meter provides the following four display items.

T1: OPERATION

Cumulative total of hours unit is powered on, in units of 10 hours

T2: DRUM ROTATION

Cumulative total of hours of drum rotation with tape threaded, in units of 10 hours

T3: TAPE RUNNING

Cumulative total of hours of tape transport operation, in units of 10 hours

CT: THREADING

Cumulative number of tape threading/unthreading operation pairs, in units of 10 operation pairs

Except for the total operation time, there are two counts for each item: the cumulative total from manufacture, and a 'trip' count resettable.

Displaying the digital hours meter

Press the HOURS METER button.

Monitor display

All four counts appear.

The four-digit value to the left of the slash is the resettable trip count, and the right value is the cumulative total from manufacture.

Time counter display

One of the four indications appears. Use the  and  buttons to change the item displayed.

Initially, only the trip value appears. Press the  button to display the cumulative total to the right of the slash, as long as the button is held down.

Ending the digital hours meter display

Press the HOURS METER button.

Resetting the trip values

Consult your Sony service representative.

Head Cleaning

Clean both the video and audio heads using the special BCT-5CLN cleaning cassette. Follow the instructions for the cleaning cassette carefully, as improper use can damage the heads.

Cleaning procedure

Insert the cleaning cassette, hold down the PLAY button and press the EJECT button. This carries out a five-second cleaning operation. The EJECT indicator flashes during this period, and all tape transport buttons other than the EJECT button are disabled.

Notes

- Up to three consecutive cleaning operations are possible.
Cleaning above this level may damage the heads.
- Be sure the unit is not left with the cleaning cassette in place, as this can cause damage to the heads.

Chapter 9

Operational Problems

If an alarm message appears on the screen, or the unit appears to be malfunctioning, check this chapter before consulting your Sony service representative.

Alarm Messages	9-2 (E)
Trouble-Shooting Chart.....	9-4 (E)

Alarm Messages

There are a number of messages which may appear on the monitor screen during operation. (A message also appears in the time counter display.)

Alarm messages

These alarm messages indicate misoperations or problems with the unit such as condensation on the drum.

To display these messages on the monitor screen, the monitor must be connected to the VIDEO 2 (SUPER) OUTPUT connector, and the CHARACTER switch on the subsidiary control panel must be in the ON position. It is possible to disable the display of warning indications in the menu system, by setting the ALARM and **REF. ALARM** items to OFF.

For details of the menu settings see the section "Menu Operations" (page 7-8(E)).

If an alarm message is indicated, take appropriate action according to its contents.

The alarm messages indications are listed below.

Alarm messages

Alarm messages on the monitor screen		Alarm messages in the time counter display
Cause	Direction	
ABNORMAL SETTINGS SELECTED IN SETUP MENU.	SET ITEMS IN THE SETUP MENU TO THE APPROPRIATE VALUES. CONTACT YOUR DEALER IF THIS ALARM APPEARS AGAIN DESPITE THE ABOVE PROCEDURE.	Irr. SETUP !
MOISTURE HAS BEEN DETECTED.	KEEP THE POWER ON AND WAIT UNTIL THIS INDICATION GOES OFF.	HUMID!
REMOTE MODE IS SELECTED.	SET REMOTE/LOCAL SWITCH TO LOCAL.	REMOTE!
KEY IS JAMMED. CHECK THE FOLLOWING KEYS: (EJECT) (STOP) (F. FWD) (REW) (PLAY) (REC) (UP) (DOWN) (RIGHT) (LEFT) (SET) (H. M.) (TC SET) (MENU) (RESET)		Key short!
NO CASSETTE IN VTR.	—	No Casse!
RECORD INHIBIT PLUG ON THE CASSETTE IS SET TO INHIBIT.	—	REC INH.I
CTL MODE IS SELECTED.	SET CTL/TC/UB SWITCH TO TC OR UB.	CTL mode !
TC EXTERNAL IS SELECTED.	SET TC INT/EXT SWITCH TO TC INT.	TC EXT!
TCG RUN MODE IS SET TO REC RUN.	SET TCG RUN MODE (SETUP MENU) TO FREE RUN.	REC RUN !
REF VIDEO IS NOT DETECTED.	INPUT A REF VIDEO SIGNAL.	No REF!
A BLACK/WHITE SIGNAL IS BEING USED FOR REF VIDEO.	USE A COLOR SIGNAL.	B&W REFI
A NON-STANDARD SIGNAL IS BEING USED FOR REF VIDEO.	USE A STANDARD SIGNAL.	REF NON-STD
INPUT VIDEO IS NOT DETECTED.	SUPPLY A VIDEO SIGNAL TO VIDEO INPUT.	No INPUT !

Trouble-Shooting Chart

Tape problems		
Symptom	Cause	Remedy
Recording is not possible.	The record-inhibit plug on the cassette is pressed in ^{a)} .	Pull out the plug, or use a different tape.
The tape transport controls (PLAY, F FWD, REW buttons etc.) do not operate.	The REMOTE/LOCAL switch is in the REMOTE position, and the LOCAL ENABLE menu setting is "STOP & EJECT" or "ALL DISABLE" ^{a)} .	Set the REMOTE/LOCAL switch to LOCAL, or change the menu setting to "ALL ENABLE".
	No cassette is loaded ³⁾ .	Insert a cassette.

Time code problems		
Symptom	Cause	Remedy
It is not possible to preset the time counter display to an arbitrary value.	The TC IN selector switch is in the EXT position ^{a)} .	Set the TC IN selector switch to the INT position.
	The CTL/LTC/U-BIT switch is in the CTL position.	Set the CTL/LTC/U-BIT switch to the LTC or U-BIT position. (It is not possible to preset time counter values.)
	The REMOTE/LOCAL switch is in the REMOTE position, and the LOCAL ENABLE menu setting is "STOP & EJECT" or "ALL DISABLE" ^{a)} .	Set the REMOTE/LOCAL switch to LOCAL, or change the menu setting to "ALL ENABLE".
Although the tape transport is operating, the time counter value does not change.	The MENU button, TC PRESET button or HOURS METER button has been pressed.	Press the button again, to exit from menu setting mode, time code presetting mode or Hours meter mode, as the case may be. (In either of these modes, the time counter display does not show time counter information.)
	The time counter display is showing user bit data.	Set the CTL/LTC/U-BIT switch to the LTC or CTL position.

a) In these states an alarm message appears both on the monitor screen and time counter display.

Monitor problems		
Symptom	Cause	Remedy
A "V" appears on the screen.	The TBC DELAY menu item is set to "VIDEO DELAY".	Set TBC DELAY to "SYNC DELAY". (The UVW-series has a built-in time base corrector. Therefore, in editing mode or video EE mode, the output video signal is delayed exactly 8 lines behind the reference signal. This means that when the TBC DELAY setting is "VIDEO DELAY", the video appears 8 lines lower on the monitor, and a "V" appears. However, even if the TBC DELAY item is set to "SYNC DELAY", if the monitor is synchronized to an external reference, a "V" also appears. This is not a malfunction.)
	A reference video signal is not being input. Alternatively, the input video signal is not synchronized to the reference signal ^{a)} .	Input a reference signal which is synchronized to the input video signal. Alternatively, use the REF. VIDEO INPUT connector on this unit in loop-through mode, and connect to the player REF. VIDEO INPUT. (In editing mode, the servo synchronizes to the input video signal. Therefore, if the input video signal and reference video signal are not synchronized, the time base corrector and servo will not synchronize, and therefore the picture will break up. Recording in this condition, however, will not affect the quality of the recording.)
The time code (or other time counter indication) superimposed on the monitor is one frame behind.	The time code is being displayed in the top third of the screen.	Move the display position down. (When using a superimposed time code, and recording on another VTR avoid the top third of the screen. In the UVW-series, the time code is superimposed as soon as read, and therefore even discontinuous time information such as user bit data can be displayed with the minimum of delay. However, since the new data value is still being processed while the beam is scanning the top third of the screen, the data from the previous frame appears if the time code is displayed within this area.)
The picture does not appear in video EE mode.	The connector to which the video signal is input does not match the setting of the VIDEO IN selector switch.	Make the setting of the VIDEO IN selector switch match the connector to which the video signal is input. When inputting a component signal, also set the component input connector selection switch correctly.
No superimposed information appears on the monitor screen.	The CHARACTER switch is in the OFF position.	Set the CHARACTER switch to the ON position.
	The monitor is not connected to the VIDEO 2 (SUPER) OUTPUT connector.	Connect the monitor to the VIDEO 2 (SUPER) OUTPUT connector. (To display superimposed information, the monitor must be connected to the VIDEO 2 (SUPER) OUTPUT connector.)
The monitor screen is too bright.	The monitor INPUT connector 75 Ω termination switch is in the OFF position, or there is no terminating device.	Set the monitor INPUT connector 75 Ω termination switch to the ON position, or connect a terminating device.
The monitor screen is too dark.	The 75 Ω termination of the video signal input is duplicated. For example, when using the REF. VIDEO INPUT connector for a loop-through connection, the 75 Ω termination switches of the REF. VIDEO INPUT connector and the VIDEO INPUT connector are both set to the ON position.	Set the 75 Ω termination switch of the connector being used for a loop-through connection to the OFF position.
The video image is too dark when editing a composite video signal.		

a) In this state an alarm message appears on the monitor screen and time counter display.

Trouble-Shooting Chart

Audio problems		
Symptom	Cause	Remedy
It is not possible to disable the Dolby noise reduction.	—	On this unit, it is not possible to disable the Dolby noise reduction.

BVR-50/50P TBC Remote Control Unit
VDC-C5 12-pin Dubbing Cable
SVRM-100 Remote Control Unit

Design and specifications are subject to change without notice.

A/B roll edit

An edit in which two or more players are used to create special effects such as dissolve and wipe, and one recorder is used to record the results of the edit. Using an editing controller allows efficient control of the VTRs and very precise editing.

B-Y signal

A chrominance signal determined by subtracting the Y (luminance) signal from the B (blue) signal. One of the component signals.

Bridging connection

A connection which allows a signal input to an input terminal to pass through the unit and exit from an output terminal as input to external equipment. Also called loop-through connection.

Capstan

A drive mechanism that moves the tape at a specific speed. Its rotation normally synchronizes with a reference sync signal.

Chrominance signal

Color signal containing color information such as hue and saturation. Also called C signal.

Color frame

The color subcarrier phase, whose one cycle consists of two frames (four fields) in NTSC format and four frames (eight fields) in PAL format.

Color framing

Maintenance of continuity in the color subcarrier phase between one frame and the next, for the purpose of avoiding noise on the picture.

Component signal

A video signal consisting of a luminance signal (Y) and two chrominance signals (R-Y, B-Y).

Composite signal

A composite video signal containing video, burst and sync signals.

CTL

Abbreviation of control signal. A pulse signal recorded on a longitudinal track of the tape in units of fields. Counting this signal allows the number of frames to be used to display the tape running time. It is also used as a control signal to adjust the relationship between the scanning position of the video heads and tape movement during playback to match that during recording.

Drop frame mode

In NTSC format, the actual number of frames per second is approximately 29.97, while that for the time code is specified as 30. Drop frame mode is a mode in which the time code is advanced in such a way that the difference in frame value between real time and the time codes is corrected. In this mode, two frames are skipped at the beginning of each minute, except for every tenth minute, so that the frame value for time codes matches that for real time.

EE mode

Abbreviation of Electric to Electric mode. Video and audio signals are supplied to the VTRs internal circuits, but not to the recording heads.

External synchronization

Synchronization of the signals and tape transport of a VTR with those of a reference VTR.

IRE

A unit for expressing video level as determined by the Institute of Radio Engineers (now called the Institute of Electrical and Electronic Engineers).

LNG recording

Abbreviation of longitudinal recording. A method of recording audio signals by radio frequency bias method on the longitudinal track of the tape using the fixed head.

LTC

Abbreviation of Longitudinal Time Code. A time code recorded in a separate track at the edge of the tape.

Luminance signal

The signal that determines the brightness of the picture. Also called Y signal. One of the component signals.

Metal tape

Magnetic tape coated with microscopic particles of metal dispersed in a liquid binder. It allows high-density recording.

Moisture condensation

Condensation of moisture on the tape transport mechanisms. If moisture condenses on the head-drum, the tape adheres to the drum and causes malfunction.

Non-drop-frame mode

A mode of advancing the time code in such a way that the difference in frame values between real time and the time code is neglected. Using this mode produces a difference of approximately 86 seconds per day between real time and time code, which causes problems when editing programs in units of seconds using the number of frames as a reference.

Oxide tape

Magnetic tape coated with microscopic particles of ferric oxide dispersed in a liquid binder.

R-Y signal

A chrominance signal determined by subtracting the Y (luminance) signal from the R (red) signal. One of the component signals.

Reference video signal

A video signal consisting of a sync signal or sync and burst signals, used as a reference.

SMPTE

Society of Motion Picture and Television Engineers.

S/N ratio

Abbreviation of Signal-to-Noise ratio. The higher the S/N ratio, the less noise and higher the picture quality.

Search mode

A VTR mode used when searching for specific scenes, by viewing the video output or time codes while playing back the tape at various speeds in forward or reverse direction.

Servo lock

Synchronizing the drum rotation phase and tape transport phase with a reference signal during playback and recording so that the video heads scan the tape in the same pattern during playback and recording.

Superimpose

To put a picture (or a set of characters) onto another so that both can be seen at the same time.

S-video input connector

A connector that inputs Y (luminance) and C (chrominance) signals separately to reduce interference between Y and C signals, and to help reproduce noiseless images.

Sync signal

A reference signal consisting of vertical and horizontal sync signals used for synchronizing the scanning patterns of the video camera and the monitor.

TBC

Abbreviation of Time Base Corrector. Electronic circuits to electrically stabilize the playback signals by removing color variation and roll in the playback picture caused by irregularity in drum rotation and tape movement. Time base correction reduces deterioration of picture quality when transmitting or copying playback signals.

Time code

Signals recorded on the tape to supply information on tape position such as the hour, minute, second and frame, to assist in setting edit points or searching for particular scenes. There are two types of time code: LTC and VITC.

Tracking

Electrically controlling the video head so that the playback phase matches the recording phase of the tape. Especially when playing back the tape with a VTR other than the one used for recording, adjusting the tracking prevents noise from appearing on the picture.

User bits

Sections of the time code consisting of a total of 32 bits used for recording information such as the year, month and day, tape ID number or a program ID number.

Glossary

V-blanking

The portion of the video signal that occurs between the end of one field and the beginning of the next. During this time, the electron beams in the cameras and monitors are turned off so that they can return from the bottom of the screen to the top without showing traces of movement on the screen. When the position of V-blanking is not adjusted correctly, a horizontal black bar appears on the screen.

VBS

Abbreviation of Video, Burst and Sync. A composite signal consisting of video signal, burst signal and sync signal.

VITC

Abbreviation of Vertical Interval Time Code. Time code recorded on a video signal track during V-blanking interval. It can be read correctly even during slow or still picture playback.
